

EXTREME WEATHER CAUSES LARGE LOSS

When a sprinkler system connection pipe burst for the 2nd time, a 400K square foot warehouse and office space was flooded with thousands of gallons of water creating massive damage.

Results (First Loss 2023)

Two 7500 CFM desiccants were installed to rapidly dry interior building envelop in 10 days. Abatement was scheduled while all contents, electronics and contents were dried and packed for storage in 4 days. Staff was relocated to another location while floors were leveled and carpet and custom cabinets were ordered. Business was not interrupted as engineers worked on a 2 week rotation while restoration continued.

BACKGROUND

The 35K square feet corporate office suite was directly affected by water damage; carpet, ceiling grid tiles, drywall and furniture were all soaked and unsalvageable.

CHALLENGES

- The inclement weather posed issues restoring heat.
- Space was affected almost exactly 1 year prior
- Glue securing carpet tiles created an environmental issue affecting timeline
- Full contents & electronics were damaged and staff required office space.
